Mulling Procedure Vertical Application

Apply 1/4" minimum bead of sealant around the perimeter and laterally on the stack bar, on both sides.

Trowel the caulk to spread it evenly across the surface.

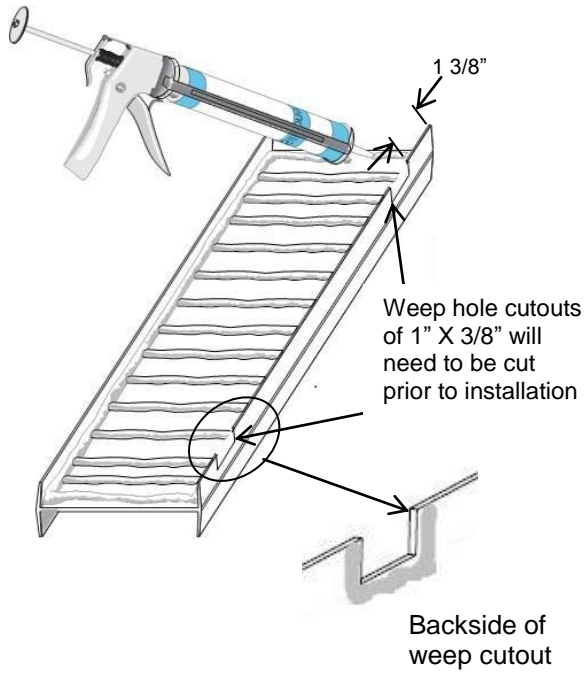

Seal all "T" bar & frame interlock screws that will be concealed by the H-Mull.

Assemble the two frames and H-Mull together, clamp tightly and install mulling fasteners.

Mulling Procedure

Horizontal/Stacked Application

Apply 1/4" minimum bead of sealant around the perimeter and laterally on the stack bar, on both sides. Also apply caulk back side of both weep cutouts as shown above

Trowel the caulk to spread it evenly across the surface.

1. Remove Nail fin (Top of bottom window & bottom of top window)
2. Apply H-Mull across top of head on bottom unit

3. Apply top window onto H-Mull

4. Finish by applying structural side straps onto the jamb area to left & right side of mull assembly (As shown)

Mullion Flashing

Nail flange weatherproofing

Apply a 3/8" nominal bead of sealant as illustrated above.

Install a minimum 4" certified self adhesive flashing, embedding the bottom edge into the sealant.

The entire head nail flange must be flashed, extending 9" below the mull for radius top frames.

Install a minimum 4" certified self adhesive flashing, embedding the vertical edge into the sealant. Continuous flashing must begin 9" below the mull and extend 9" above the entire frame and onto the sheathing.
